

A RAPIDLY CHANGING HEALTHCARE INDUSTRY

There is no segment of American industry undergoing as much change as healthcare.

New hospital construction today now shares a significant percentage of project investment dollars with clinics, urgent care, ambulatory facilities and additions and renovations to existing structures.

But no matter the patient destination, all are under pressure to be equipped to deliver high quality care while reducing costs.

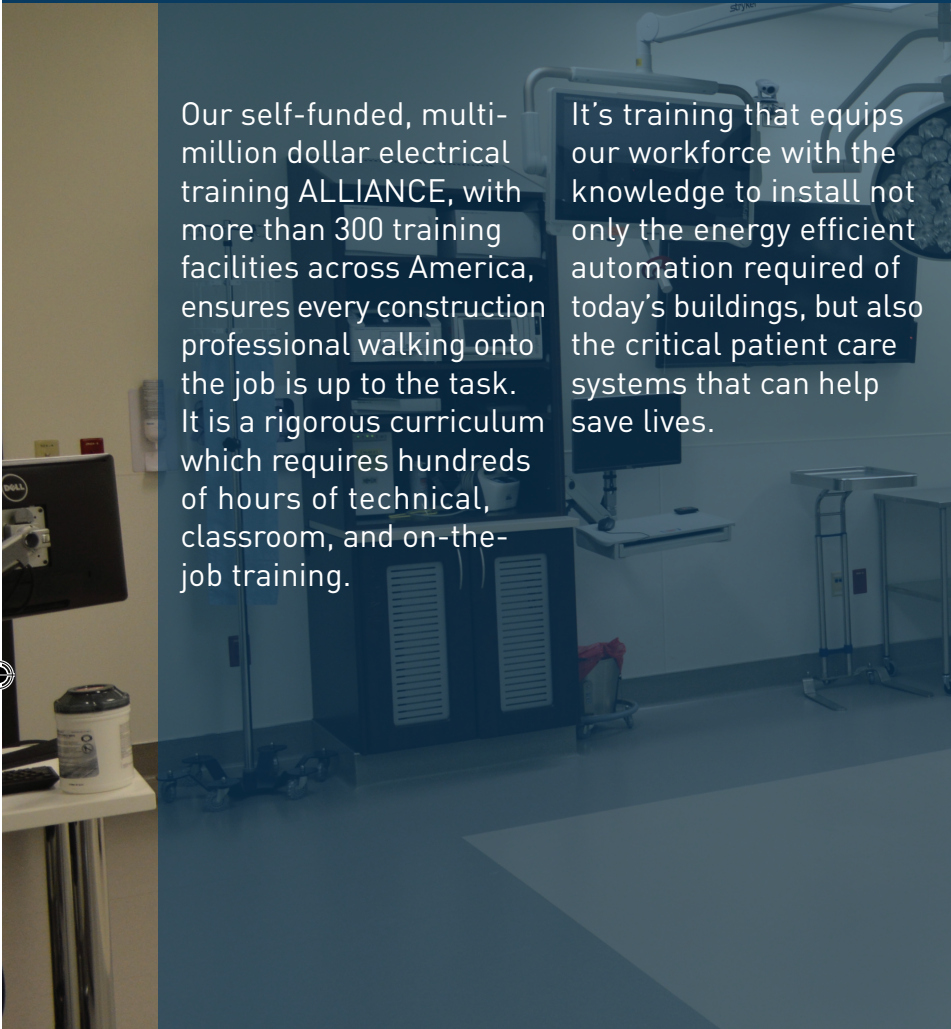

It is this demand that positions the Powering America team to be

an invaluable asset to any health care provider.

We understand the unique challenges and complex government regulations that go into healthcare projects from hospitals to outpatient clinics.

With planning, pre-construction and construction professionals that speak the language of the health care industry, we have the expertise to build, renovate, or repurpose any facility.

Our self-funded, multi-million dollar electrical training ALLIANCE, with more than 300 training facilities across America, ensures every construction professional walking onto the job is up to the task. It is a rigorous curriculum which requires hundreds of hours of technical, classroom, and on-the-job training.

It's training that equips our workforce with the knowledge to install not only the energy efficient automation required of today's buildings, but also the critical patient care systems that can help save lives.
