

DATA CENTERS AND THE DIGITAL AGE

Data center work is in our wheelhouse. Since the dawn of the Digital Age, the Powering America team has been training our workforce in installing and maintaining data centers across the country.

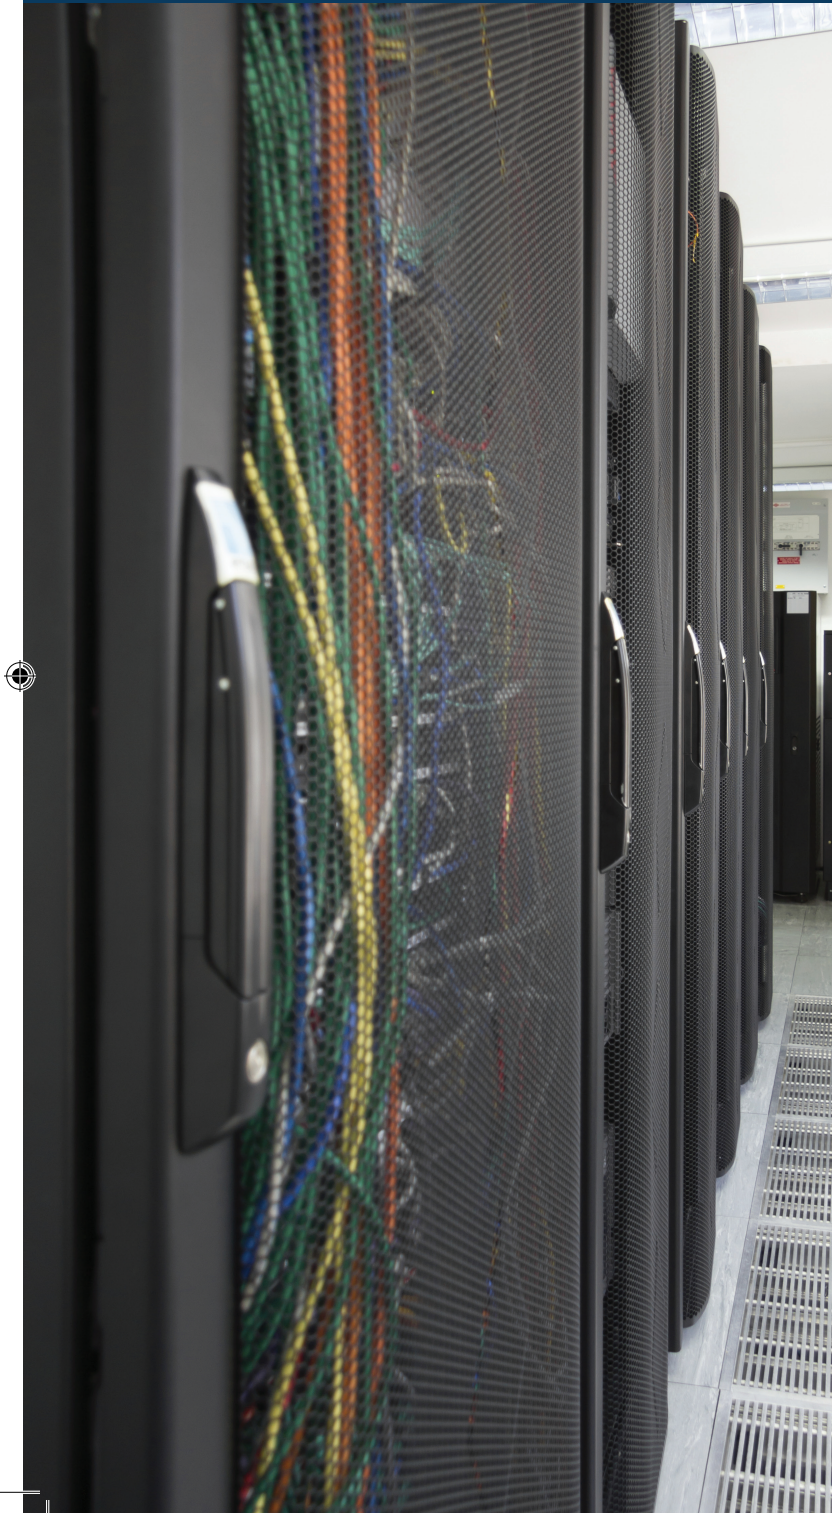

Today our resume includes working with all of the major providers of cloud-based data in the digital world from Fortune 500 giants to local industries and banks.

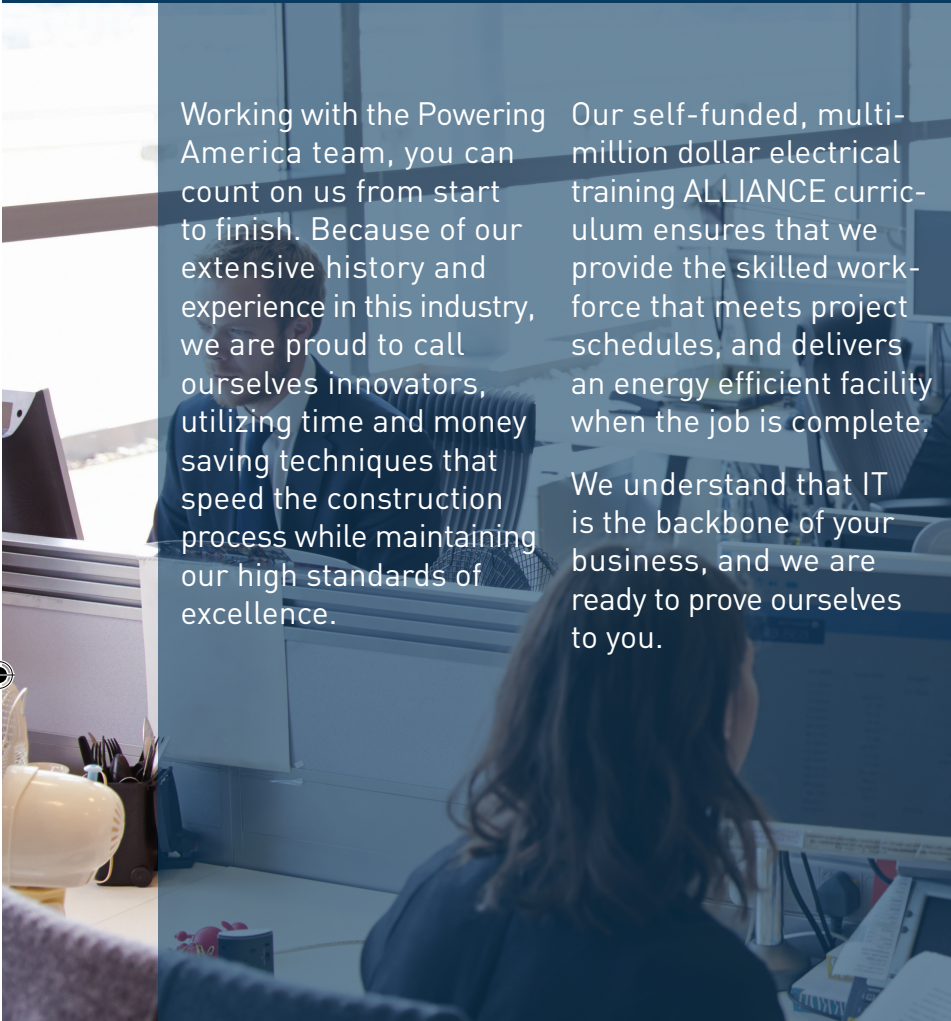

More importantly, we have kept pace as this rapidly changing, instant information era has evolved. The reality that virtually our entire

population utilizes one, or usually several smart devices, sending and receiving information over a faster internet, has exponentially increased the industry's needs to meet this market.

It's because of this enormous growth and storage of cloud-based data that today's data centers not only perform unfailingly, they must also be as environmentally friendly as possible.

We will help you in the design and handle the installation of the electrical systems.

Working with the Powering America team, you can count on us from start to finish. Because of our extensive history and experience in this industry, we are proud to call ourselves innovators, utilizing time and money saving techniques that speed the construction process while maintaining our high standards of excellence.

Our self-funded, multi-million dollar electrical training ALLIANCE curriculum ensures that we provide the skilled workforce that meets project schedules, and delivers an energy efficient facility when the job is complete.

We understand that IT is the backbone of your business, and we are ready to prove ourselves to you.
